CONCLUSION

After we completed the project we were sure the problems in the existing system are overcome. The "**LIBRARY MANAGEMENT SYSTEM**" process made computerized to reduce human errors and to increase the efficiency. The main focus of this project is to lessen human efforts. The maintenance of the records is made efficient, as all the records are stored in the ACCESS database, through which data can be retrieved easily. The editing is also made simpler. The user has to just type in the required field and update the desired field.

Our main aim of the project is to get the correct information about a particular student and books available in the library.

The problems, which existed, have been removed to a large extent. And it is expected that this project will go a long way in satisfying user's requirements. The computerization of the Library Management will not only improve the efficiency but will also reduce human stress thereby indirectly improving human recourses
